

Technical Business Consultant

Position Description

Provide Kamakura Corporation pre-sales support for technology, architecture, database, data management and reporting solutions. Implement and configure risk products, data management software, and reporting products/tools at client site. Configure systems to extract, transform, and load (ETL) data to a target database. Assist in performance testing and tuning, data validation, and data quality measures. Guide clients with data management software, reporting concepts and applications. Train clients in Kamakura Corporation risk and reporting products by documenting succinct standard operating procedures.

Required Experience and Education:

- Three years of experience in SQL query, Oracle (PL/SQL), MSSQL (TSQL), Visual Basic, Cognos, ETL software (DTS, SSIS, DataStage, etc).
- Experience and business acumen with implementation skills in a wide range of financial products; modelling; valuation, finance theory, risk management, regional banking practices.
- Analytical and technology skills in complex financial environment.
- Bachelor degree or post graduate degree Information Systems, MIS or Engineering.

Required Skills:

- Ability to clearly communicate and document ideas, and assist in the creation of project plans.
- Demonstrated skill to work independently and under pressure.
- Must be team player and able to work with diverse peer group and clientele.
- Sensitive to cultural differences and varying business customs.
- Acute ability to understand verbal and non-verbal cues.
- Fluent in English both oral and written.

Other:

- Travel is required - must be eligible for intercountry visas.
- Position is located in Vietnam.
